Help, Questions ?  
[Soleyman404@gmail.com](mailto:Soleyman404@gmail.com)

Hello guys , today i will show you that, how to use google dork for hacking, Its very basic and most important thing for hacking ;) . So, Let's start -

You can use google dorks to find SQL injection vulnerabilities. Here is an example of google dork:

Code:

```
inurl:index.php?id=+.com
```

This one will search for "index.php?id" in the URL in .com domains

Here is list with SQLi dorks:

Code:

<http://pastebin.com/wUyRb0k8>

You can add + (domainhere) Here are some examples:

Code:

inurl: index.php?id= +.com

inurl: index.php?id= +.net

inurl: index.php?id= +.org

inurl: index.php?id= +.cc

inurl: index.php?id= +.ws

inurl: index.php?id= +.edu

inurl: index.php?id= +.gov

Also you could search for keywords by that way:

Code:

inurl:index.php?id= intext"keyword"

just type intext"keyword" and change keyword with something for example credit card.

I think this is enough for basics of google dorks, since I don't want 1000000000000 defaced websites after publishing this.

Some Dork For Finding Shell

Code:

inurl:.php "cURL: ON MySQL: ON MSSQL: OFF"

"Shell" filetype:php intext:"uname -a:" "EDT 2010?"

intitle:"intitle:r57shell" [ phpinfo ] [ php.ini ] [ cpu ] [ mem ] [ users ] [ tmp ] [ delete ]

inurl:"c99.php" & intext:Encoder Tools Proc. FTP brute Sec. SQL PHP-code Update Feedback Self remove Logout

inurl:"c100.php" & intext:Encoder Tools Proc. FTP brute Sec. SQL PHP-code Update Feedback Self remove Logout

intitle:"Shell" inurl:".php" & intext:Encoder Tools Proc. FTP brute Sec. SQL PHP-code Updat

Some Israel site Dork

Code:

intext:"error in your SQL syntax" +site:il

intext:"mysql\_num\_rows()" +site:il

intext:"mysql\_fetch\_array()" +site:il

intext:"Error Occurred While Processing Request" +site:il

intext:"Server Error in '/' Application" +site:il

intext:"Microsoft OLE DB Provider for ODBC Drivers error" +site:il

intext:"Invalid Querystring" +site:il

intext:"OLE DB Provider for ODBC" +site:il

intext:"VBScript Runtime" +site:il

intext:"ADODB.Field" +site:il

intext:"BOF or EOF" +site:il

intext:"ADODB.Command" +site:il

intext:"JET Database" +site:il

intext:"mysql\_fetch\_row()" +site:il

intext:"Syntax error" +site:il

intext:"include()" +site:il

intext:"mysql\_fetch\_assoc()" +site:il

intext:"mysql\_fetch\_object()" +site:il

intext:"mysql\_numrows()" +site:il

intext:"GetArray()" +site:il

intext:"FetchRow()" +site:il

intext:"Input string was not in a correct format" +site:il

Happy Dorking :D
